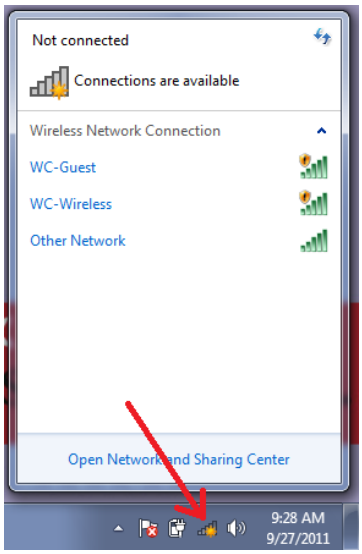
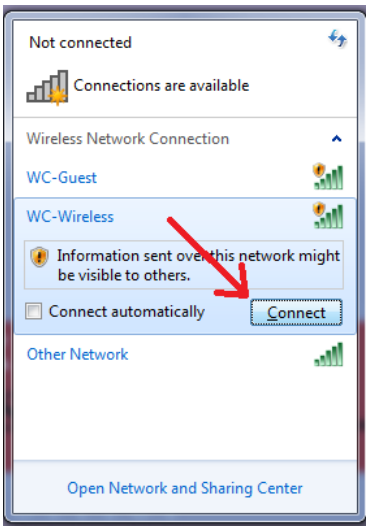
Connect to the Wireless Network

Washington College has a campus wide wireless network accessible to faculty, staff and students. It can be connected to by anyone but you must have a valid Washington College email account to use it. Connecting with Windows 7 is similar to Windows XP but there are minor differences.

1. First, be sure your wireless switch is turned on. This can be a physical switch or a key combination you have to press. Click the Wireless icon in the system tray and a list of available wireless networks will pop up to choose. Ours is WC-Wireless.

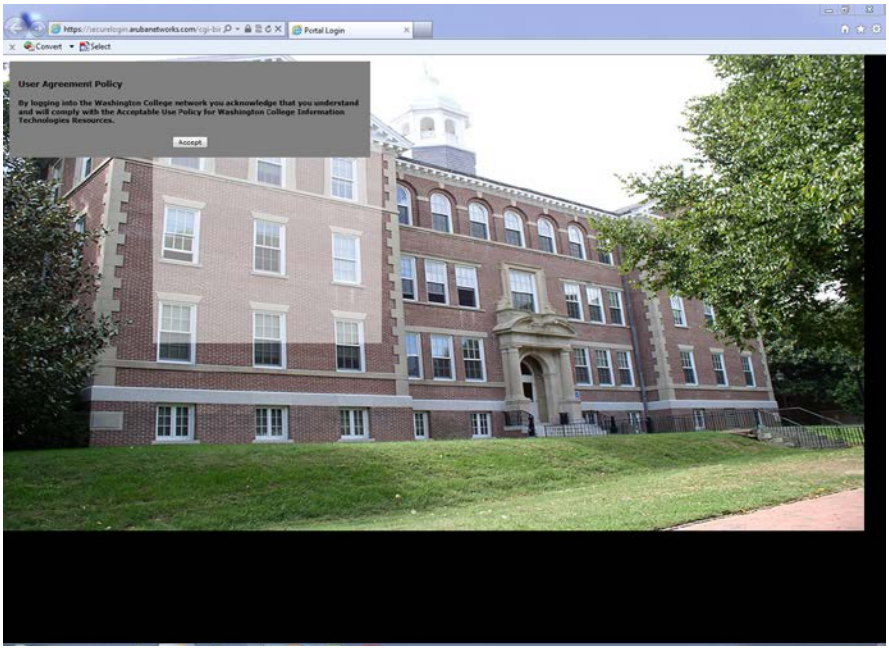


2. Click Connect to connect to this network.

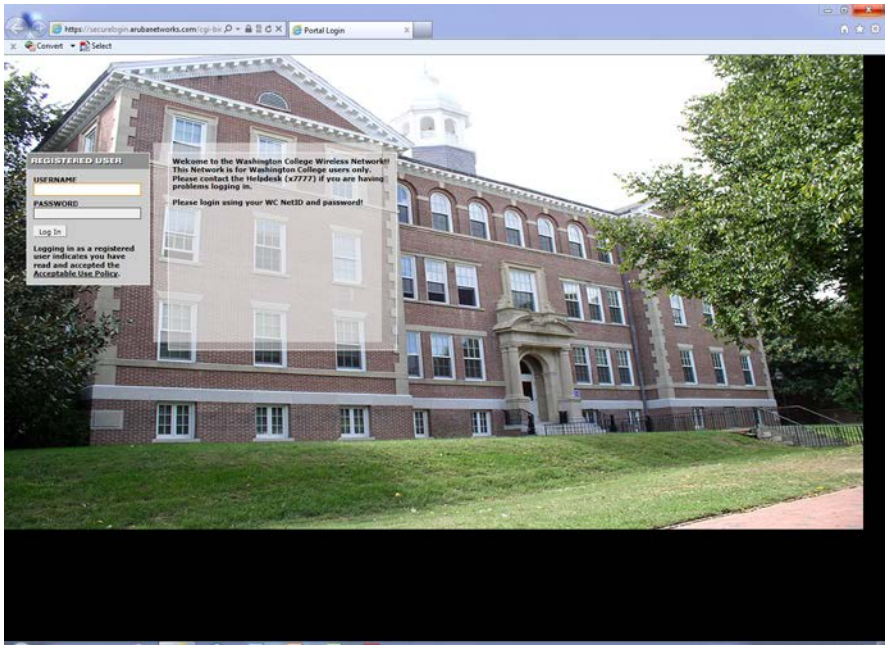


The wireless network window will update to show that you are connected. You just have to open a browser and enter your email account and password.

Upon opening a browser, you will have to accept the User Agreement Policy. This verifies that you will use the network in an acceptable manner. Failure to do so will result in suspension of your account.



After you click Accept, you will be able to enter your username and password.



The next window you see will be a site on the internet. Keep in mind that you must log into the network to use any network services.
