The Washington College Student Unix computer system, comprised of the servers known as “Albert” and “Sampson,” is provided as a resource to support the computing needs of Washington College Math and Computer Science students, staff and faculty. As a resource, the student Unix system is the property of Washington College.

All users must comply with Washington College policies as well as with local, state and federal laws and policies.

Use of the Student Unix System resource implies that you accept the responsibility to comply with the applicable policies and laws and with the following additional rules:

1. You understand that if your account is inactive for 12 months the account will be suspended and inaccessible. The suspension may be appealed through a faculty member in Computer Science.

2. You understand that when you graduate your account will be suspended after six months unless you submit an application that explains why it should not be suspended. You may be required to obtain an endorsement from a faculty member in the program for Computer Science.

Violations of this policy will result in terminating the account, purging all files and data contained therein and referral of the situation to appropriate College administrators and/or the Honor Board for further action.
