HD Voice just became more advanced with Wi-Fi Calling.

You really can get anything on the Internet these days, including clear phone calls around the globe. With HD Voice’s latest feature, Wi-Fi Calling, you can make and receive calls over Wi-Fi network both domestically and internationally, all while still getting simultaneous voice and data. The list of capable devices is growing fast, so HD Voice is a better idea than ever. And trust us, better matters.

Setting up Wi-Fi Calling on Android Devices
1. Ensure Advanced Calling is activated. (Activation requires a valid US address for E911 functionality.)
2. From the Home screen, navigate: Apps > Settings > Advanced Calling.
3. Tap Activate Wi-Fi Calling.
4. Review the Terms & Conditions then tap CONTINUE. (If agreeable, ensure the Terms & Conditions option is checked.)
5. Enter Emergency Location Information (E911) address then tap SAVE. (This information gets transmitted to the emergency dispatcher for all 911 calls made over Wi-Fi network. If address validation fails then the users will be prompted to enter a new address until a valid address is entered.)
6. Upon successful validation of the address, Wi-Fi Calling turns on.

Setting up Wi-Fi Calling on Apple Smartphones
1. From the Home screen, navigate: Settings > Phone.
2. Tap Wi-Fi Calling.
3. Tap the Wi-Fi calling on this iPhone switch to turn on.
4. From the Enable Wi-Fi calling pop-up, tap Enable.
5. From the “Important - Emergency 911 address...” screen, complete address fields.
6. Tap Done.
7. From the Terms and Conditions screen, tap the Radio button then tap Continue. Accepted when a check mark is present.
8. Ensure the “Wi-Fi calling on this iPhone” switch is set to on.
