## STEM Programs

As a STEM student, you have access to a wide variety of opportunities in a range of scientific disciplines. Many colleges, universities, and other institutions are committed to furthering undergraduate STEM education, and offer summer programs that can be instrumental in your career in undergrad and beyond. Here are some of the most common programs and what they typically offer:

### REU—Research Experience for Undergraduates by the National Science Foundation (NSF)

What is a REU?

- Research Experience for Undergraduates (REU) programs are funded by The National Science Foundation (NSF) in many colleges, universities, and organizations nationwide to provide undergraduates interested in various areas of science with the research experience necessary to succeed in a laboratory or clinical setting. REUs exist for a wide range of disciplines, and many institutions allow the participant to choose his or her research area of interest.
- To browse REUs nationwide, visit [this webpage](#).

### SURF/SROP/SURP

What is a SURF/SROP/SURP?

- These are acronyms used by many colleges and universities to advertise their Summer Undergraduate Research Fellowship (SURF), Summer Research Opportunity (SROP), or Summer Undergraduate Research Program (SURP). These opportunities are funded by the institutions that offer them, and, like REUs, also exist to provide undergraduate students interested in research careers with summer experiences. Some of the opportunities listed here fall under this category.
- If you are interested in a particular college, university, or institution, try searching for SURF/SROP/SURP on their website.

### Amgen Scholars

- Amgen sponsors research programs in several different institutions across the nation.
- To browse Amgen Scholars sites, visit [this webpage](#).

### Tips for Success:

- **Make an appointment with the Career Center!** The Career Advisors there will be more than happy to guide you through your internship-search process and can help you narrow down and identify the opportunities that suit you best.
- **Start early.** Searching for the right internship can be time-consuming, and deadlines are often during the early spring. Start your search during the fall so that you can line up any letters of recommendation that you might need. You should let your recommenders know at least 3-4 weeks before the deadline.
- **Get involved.** The College has many ways to get involved with the STEM departments, and this will be a good way to familiarize yourself with what a scientific internship will be like. Talk to your professors about any opportunities they might know about.
- **Volunteer!** Volunteer experience can be just as valuable as an internship. If you have an organization in mind, don't be afraid to ask about any volunteer opportunities they might have.
